

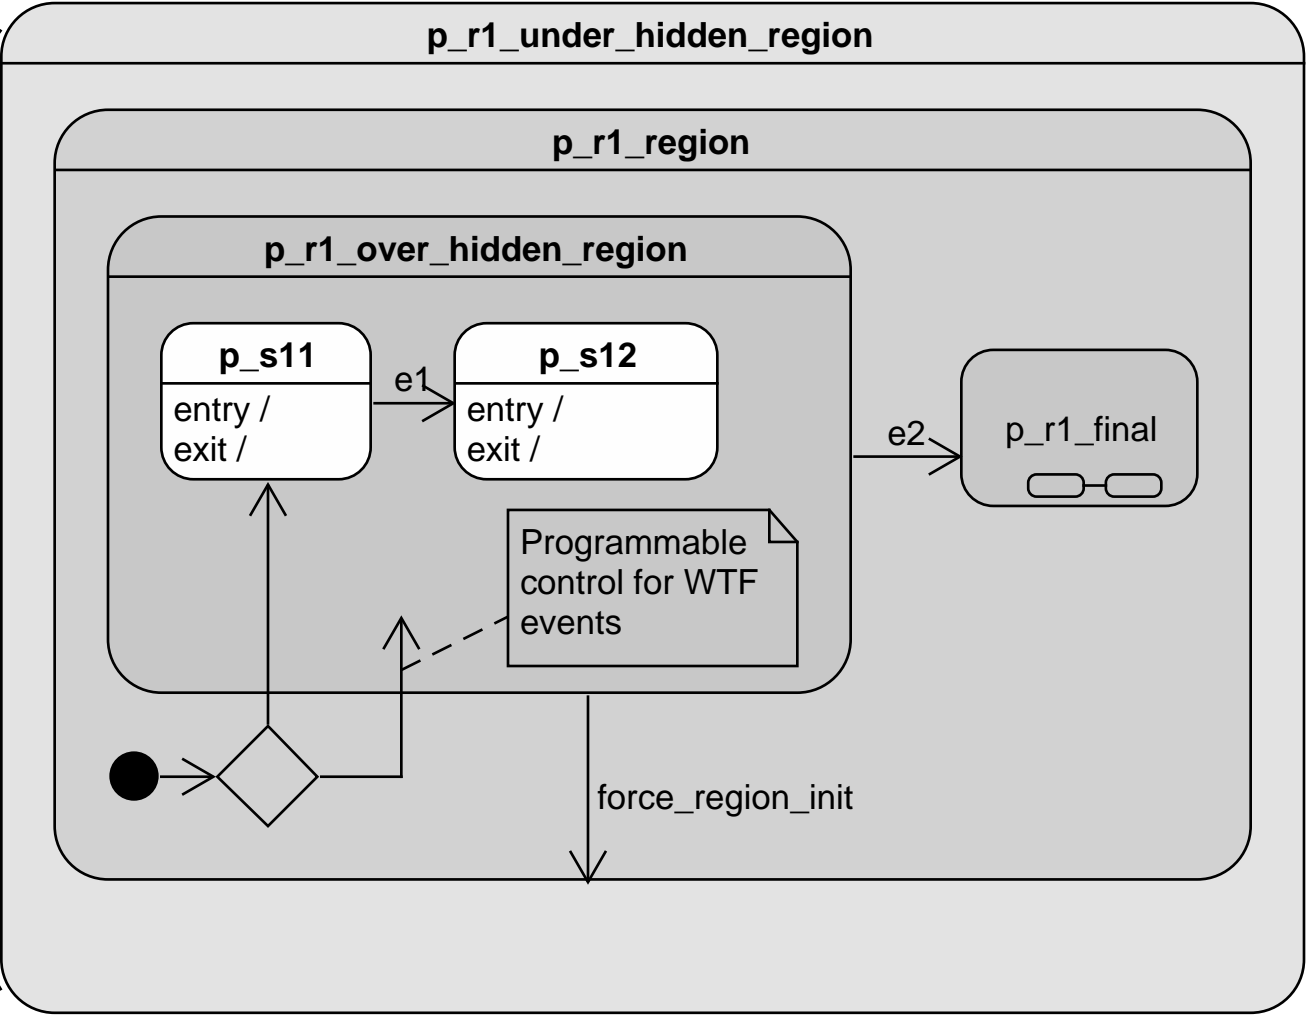

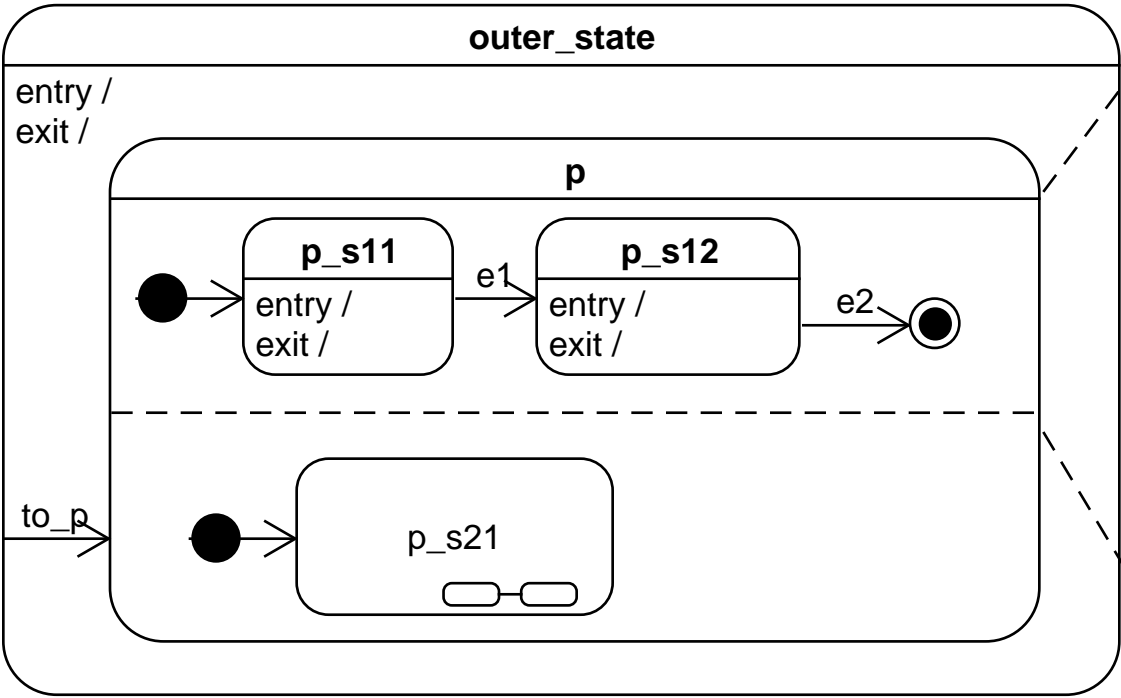

Mapping onto an
orthogonal component

Harel Diagram

Regions
...
add(self, region_name, outer) # function construction occurs here link()
...

```
Code to build regions would look like this:  
outer = self  
regions = Regions(name='p', outmost=self). \  
    add('p_r1', outer=outer). \  
    add('p_r2', outer=outer).link()
```
